drill and produce both natural gas and iodine.

coal bed natural gas
Food Procesing, meat processing

open-pit talc mining and sorting operation; use explosives

milling facility for precious and base metals.

coal fired steam electric generating plant

Oil production

conventional potable water treatment plant

MRL operates a wastewater treatment plant (WWTP) that treats wastewater from two facilities. MRL operates it's own railroad engine overhaul and heavy maintenance facility and Talgo-LRC, LLC (formerly known as the Livingston Rebuild Center, Inc.) operates a locomotive engine rebuilding facility.

Open pit copper molybdenum mine

MSCC processes refinery "acid gas" and "sour fuel gas" from ExxonMobil and returns processed fuel gas to the refinery. Chemical products and gases are produced from the gas treatment process. The MSCC gas treatment process scrubs and de-sulfurizes fuel gases and processes hydrogen sulfide-containing gases into elemental sulfur (brimstone)

The Galen WWTP serves the residents and employees of the non-profit 501 C-3 corporation Montana Behavioral Health, Inc. (MBH) Galen Campus. Production of high purity polycrystalline silicon underground copper and silver mine The applicant processes sugar beets to produce refined sugar. surface coal mine; no discharge at this point.

open pit metal mine and flotation mill (silver, gold, and

The adit has been closed, flooded and site has

base metals concentrate)

undergone reclamation.

platinum and palladium mine

Abandoned underground precious metal mine surface coal mine; use ammonia nitrate. Commonly use water and use for dust control. No discharge. The applicant processes sugar beets to produce refined sugar. surface coal mine; use ammonia nitrate. Commonly use water and use for dust control. No discharge. surface coal mine; small facility (9 employees). Likely not to discharge or have RP for nutrients. BituMinous Coal Screening Plant psychiatric and other treatment and support for children, youth and their families

non-leaching wet process to manufacture cement.

steam and electric generating plant

Outfalls 002 is a discharge of condenser cooling water with an estimated flow of 50 MGD and a maximum flow of 131 MGD. Outfall 003 is a discharge which consists of an estimated 210 gpm from the Corette Plant bottom ash waste water, 1 gpm from plant floor drains, 10 gpm from the furnace seal water, 12 gpm from the evaporator blowdown and storm runoff from the plant site not to include storm runoff from coal stockpiles
